### ***DETAILED ACTION***

Claim 10 has been canceled. Therefore, claims 1-9 are currently pending in this application.

#### **Reasons for Allowance**

Claims 1-9 are directed to a process for recovery of plant sterols and tocopherols from deodorization distillates formed during chemical or physical refining of vegetable oils. The process consists of the following steps: free fatty acids are removed from the deodorization distillate by vacuum distillation or by continuation solvent saponification, after the removal of free fatty acids, the received material is reacted with an aromatic carboxylic acid anhydride at a temperature of 50-150.degree. C., under reduced pressure, after the treatment with anhydride, tocopherols are removed from the mixture, and crystalline free sterols are recovered from the distillation residue containing sterol esters, di- and triglycerides by transesterification. The closest prior arts are to Sumner, Jr., U.S. Patent Nos. 6,706,898 B2 and to Bamicki et al, U.S. Patent No. 5,512,691 A. Sumner teach method for separating tococpherol from a tocopherol containing mixtures. The novel and nonobvious aspect of this invention involves step that involves reaction with an aromatic carboxylic acid anhydride. The prior art of record fails to teach or suggest the process as described in this application. Therefore, claims 1-9 are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement for Reasons for Allowance."
